## Population Video

You're going to love this! You may have to watch it twice!  
As you are watching do the following:

1. Do you agree with what he is saying? (You can disagree, you just need to back up what you are thinking!)
2. List 5 statistics/facts he discusses.
3. Do the statistics tell the whole story? Why or why not?
4. What will happen if the world continues on the path he is predicting?
5. Is there a "solution" to what is happening?

BBC Four

# The Joy of Stats

## Hans Rosling's 200 countries, 200 years, 4 minutes

**DURATION: 04:42**

Hans Rosling's famous lectures combine enormous quantities of public data with a sport's commentator's style to reveal the story of the world's past, present and future development. Now he explores stats in a way he has never done before - using augmented reality animation.

In this spectacular section of 'The Joy of Stats' he tells the story of the world in 200 countries over 200 years using 120,000 numbers - in just four minutes.

Plotting life expectancy against income for every country since 1810, Hans shows how the world we live in is radically different from the world most of us imagine.
